

Accoya Case Studies Revisited

De Vere's Boat House – Loch Lomond,
Scotland

Summer 2008

the world's leading high technology wood

Project Detail

- One of Scotland's premier hotel destinations has unveiled Accoya® in its Boathouse Restaurant at the De Vere Cameron house hotel in Loch Lomond, Scotland.
- The restaurant recently underwent a makeover by Birmingham cladding specialists, Vincent Timber who used the revolutionary modified wood as the key ingredient to achieve the exquisite new look.
- 10,000 linear metres of Accoya timber cladding was used for panelling the exterior of the building and adding the finishing touches to the bar and restaurant area.

Project Detail

- Darren Powell of Vincent Timber said: “We chose Accoya after evaluating it against other cladding products and the customer was pleased with its performance in both its internal and external uses. We used the wood in horizontal and vertical profile along with trims, reveals and corners.”
- Darren added: “Accoya offers superb stability and durability which guarantees an excellent performance when compared to other coated timber products. It is a very easy product to handle and the absence of cracks made it ideal for this project.”
