

Accoya Case Studies Revisited

Scottish Widows Building –
Edinburgh, Scotland
October 2008

the world's leading high technology wood

Project Detail

- A bespoke solar shading system using Accoya® wood on Scottish Widows' building at Exchange Place, Edinburgh. 1,060 Accoya® wood fins were used in combination with glass fins and Matrix XL Brise Soleil to prevent excessive solar heat gain within the building.

Accoya® wood was chosen for its structural stability, durability and because it is sustainably sourced. Levolux was able to offer a 10 year warranty for the finish and a life expectancy of 60 years.
